Our **Services**

Web Application Development

We build fully functional, robust, and scalable web applications by using the latest technology stacks to align with the business objectives, achieve maximum growth, and maximize resource utilization at a competitive cost by:

- Following CI/CD best approaches to consistent delivery.
- Integrating cloud power and web solutions.
- Building service-oriented-architectures (SOA).
- Commitment to QA practices.
- Support and maintenance 24/7.

Deliverables

- Web platforms.
- Legacy software modernization.

Our Services

Mobile Applications Development

We build mobile applications that can work on any device or any platform ensuring their secure, scalable, and sustainable including the idea and concept to deliver, support, encourage business growth, expansion, and meet market needs. Including:

- **Native mobile app development** refers to high-quality native apps that are built for both systems, Android and iOS in compliance with the business requirements.
- **Hybrid mobile app development** refers to the app that works in different environments by blending native and web app technologies.

Deliverables

- Native IOS and Android apps development.
- Maintenance and post-warranty support.
- Cross-platform solutions.
- Consulting and prototyping.
- Automated QA and testing.

Our Services

UI / UX Design

We use the latest technologies and proven approaches in designing, prototyping, product validation, and UI design services to create professional applications that help our clients to develop their business by ensuring eye-catching modern designs, user-friendliness, and value addition.

Deliverables

- User experience consulting.
- Responsive web design.
- Promotional designs.
- Mobile app design.
- CX.
- Design System.

Our **Services**

Software Testing Service

We introduce all types of software testing for ensuring the coverage of the application's functional and non-functional requirements. Outsourcing testing helps organizations focus on developing their products and releasing bug-free applications.

We provide a high-quality product that increases compliance levels, decreases maintenance costs, and expensive rectification. So we can focus on product development and growth by reducing the product launch cycle and detecting errors and defects.

Deliverables

- System testing (Blackbox).
- Integration testing (Graybox).
- Performance (Load/Stress).
- Error-handling testing.
- Compatibility testing.
- Localization testing.
- Regression testing.
- Automation testing.
- Usability testing.
- Security testing.
- Mobile testing.
- UAT.
- Deployment DevOps.

Our Services

Managing Services

We provide all outsourcing services on a systematic basis, such as supervision, inspection, quality control, consultation, training, assessment, testing, development, and operation to increase the efficiency of projects, ensure the continuity and knowledge of the operations, and dedicate the predictable operational expenses (OpEx) cost.

Deliverables

- Operation & Maintenance.
- Outsourcing.
- Managed Services.
- Web and mobile applications.
- End-User Training.

Our **Services**

CTO As a Service

CaaS stands for CTO as a Service and refers to hiring a part-time CTO. CaaS provides the assistance of a technical consultant to focus on technology-driven challenges and envisage the vision, roadmap and timelines in line with your business targets.

Deliverables

- Operation & Maintenance.
- technical consulting.
- define technical roadmap.

Our Services

Digital Transformation and Service Delivery

We use digital technologies to transform non-digital business processes and services and create new ones to align with the evolving market, customer expectations, and project/product requirements. So we change the way of managing and operating businesses, and how to deliver value to customers to improve efficiency and value, innovate, and improve the customer experience.

We use sequence steps and apply the best practices to develop and deliver software that begins with decision-making and ends with a full deployment. So we can dedicate proper direction to projects, provide better scope management, and prevent issues from happening during the development phase.

Deliverables

- Business technology services.
- Intelligent automation.
- Customer experience.
- Artificial intelligence.
- Design and prototyping.
- Software development.
- Operations and maintenance.
- Cloud solutions.
- Requirements.
- Deployment.
- Planning.
- Testing.

Our Services

Low code / No coding technology

We can provide low code / no code services that are specialized in the following tools through our partners:

Oracle Application Express (APEX) is a low-code development platform that allows you to create scalable, secure enterprise programs that can be deployed anywhere.

Mendix is the only platform that allows both corporate and professional developers to create apps that have a faster time to market. Listen to what our consumers have to say.

OutSystems is a low-code platform for building mobile and web enterprise apps that can run in the cloud, on-premises, or in a hybrid environment.

PEGA is a popular Business Process Management (BPM) tool based on Java ideas that enable users to make changes more quickly than Java-based applications. PEGA is primarily used to decrease costs and improve business outcomes.

Our Services

Digital Marketing

We help businesses to reach their target audience by using suitable digital channels and encourage them to engage on platforms while gaining their loyalty by communicating frequently. Thus we utilize KPIs to accurately measure results and optimize conversion rates to increase revenue.

Deliverables

- Search engine optimization (SEO).
- Social media marketing.
- Promotion of brands.
- Content marketing.
- Email marketing.
- Advertising.

Our **Services**

Web Hosting and Mobile App hosting

We provide web hosting and mobile app hosting, choosing a solution adapted to the specific needs of the client and the product. Choosing the space, architecture, processing power, OS, and security you want with hosting service, working with the popular cloud hosting offerings include Amazon Web Services (AWS), Google Cloud Platform, IBM Cloud, and Microsoft Azure, digital ocean.

Deliverables

- Deployment diagrams
- Web application hosting
- Mobile application hosting
- Architecture diagrams
- VPS, dedicated, shared servers
- WordPress hosting

Our Services

Integration Service and Process Automation

helps organizations automate, manage, and orchestrate their IT and business processes. We can holistically control workflows across multiple platforms and business applications regardless of where the data resides. We used the following tools:

- Oracle BPM.
- Camunda.
- PEGA, Out System.
- oracle BPEL.
- Oracle Integration Cloud.
- ETL.

Our Services

Oracle Integration Cloud

We provide a cross-technology and cross-system connectivity and application integration to help customers create agile organizations that provide superb e-services to stakeholders. We deliver specialized end-to-end solutions that help integrate government and enterprise systems through enterprise service buses, gateways, and third-party applications and systems.

- Oracle Integration Cloud (ICS, PCS, VBCS).
- Connecting, virtualizing, and managing interactions between services and applications using Oracle Service Bus (OSB).
- Business Process modeling using Oracle BPM.
- Oracle SOA architecture and Implementation.
- Environment setup in different modes (Single, High Availability, Disaster Recovery).
- Oracle Middleware Environments Assessment (Configuration/Performance).
- Work procedures & business processes analysis and optimization.
- Oracle BPM performance tuning.
- Monitoring your business using Oracle Business Activity Monitoring (BAM).

Our Services

Cyber Security

We provide professional consultancy and enterprise solutions in Cyber Security for all sectors. It is our endeavor to ensure that the system information is fully protected against failures, down time and other harmful security threats.

Deliverables

- Training, Education & Awareness.
- Cyber Security Services.
- ISO 27001 Consulting.
- Penetration Testing and Vulnerability Assessment.
- Cyber Security Solutions.
- Infrastructure and Network "SOC & NOC".
- Data and Application.
- End Point Protection and Monitoring.
- Advanced Threat Protection.

Our Services

Outsourcing and Team as a service

Providing a remote full stack development team, that uses popular web technologies, expertise in web and mobile technologies.

Access to additional talent pools and flexible scaling are critical for businesses, that want to innovate and succeed with your software products.

Even if you have a clear project roadmap and a strong core team, extra development capabilities will help you reach your milestones faster.

Agile Procedures And Technical Elegance That Empower Our Experts In Digital Transformation.

1 Research

Everything starts with a good idea. We research your industry and seek opportunities to offer more value for the users.

2 Strategy

With planning and customized strategy we kick start your dynamic project with unique features and functionalities that meet users' every expectation.

3 UI/UX Design

We start with working on the architecture and continue adding aesthetic visuals and graphics that engage the users and deliver an intuitive user journey.

4 Development

Now is the time to add smooth functionality to ensure meaningful experience and engagement that keep users coming back for more.

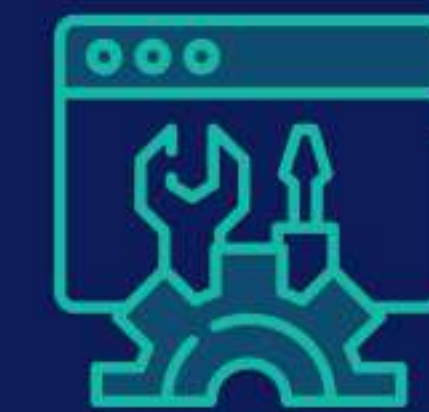

5 Quality Assurance

We have an expert QA team that looks into every aspect of the project through detailed procedures before we put it out in the world.

6 Maintenance

ViableTree's tech-savvy solutions include regular software upgrades, security support and maintenance to ensure a smooth and fun ride for users.
